

InFlight

INTEGRATION ON THE FLY

There's more than one way to bring PeopleSoft into SharePoint...
This One Just Works!

***Imagine bringing fully interactive
PeopleSoft components into SharePoint
...or SharePoint web parts into PeopleSoft.
Then imagine it all without having to write
a single line of code***

- ***Compatible with PeopleSoft 8.8-9.1***
- ***Compatible with PeopleTools 8.46-8.51***
- ***Compatible with SharePoint 2007 & SharePoint 2010***
- ***Secure & audit friendly***
- ***Requires no additional hardware***
- ***Uses existing roles & permissions***
- ***Optional Single Sign-On into PeopleSoft***
- ***Shifts burden to cheaper SharePoint servers***

SharePoint is Microsoft's fastest growing product line. It is also quickly becoming the intranet and document management platform for many organizations.

If you have both PeopleSoft and SharePoint up and running, then BTRG has a low-cost tool called InFlight™ that makes PeopleSoft SharePoint integration a reality quickly, securely and without having to write a single line of code.

InFlight™ is the only PeopleSoft SharePoint integration solution classified as an Oracle Validated Integration for PeopleSoft Enterprise. This means InFlight is a standards-based product integration, tested and validated by Oracle.

***If you're looking for ways to integrate
PeopleSoft and SharePoint, your evaluation
of the available options won't be complete
until you've closely considered InFlight.***

Integrating PeopleSoft Content into SharePoint is easy as...

Integrating SharePoint Content into PeopleSoft is easy as...

Although we've been successfully integrating PeopleSoft content into SharePoint since 2009, we often get asked, "Does it work in reverse?" Today, it does. InFlight now allows you to surface SharePoint web parts into PeopleSoft Portal and PeopleSoft Enterprise Applications.

By leveraging some of the latest functionality in PeopleTools 8.50, InFlight is now able to present SharePoint web parts inside of the PeopleSoft Related Content Framework. The Related Content Framework in PeopleTools 8.50 enables customers to present a combination of PeopleSoft transaction pages with collaborative, analytical and informational content.

InFlight allows you to surface PeopleSoft components into SharePoint one at a time and shape, skin and modify their appearance.

InFlight is a custom SharePoint web part that allows you to "widgetize" PeopleSoft and pull its components into SharePoint without having to write any code. No changes to your PeopleSoft environment are required and as a SharePoint web part, InFlight is easily deployed. Once fully installed, InFlight allows you to integrate PeopleSoft and SharePoint in 3 easy steps.

That's it! Get out of edit mode and you're publishing PeopleSoft content through SharePoint.

InFlight™ runs as a custom web part and a server component directly on the SharePoint server. Although it runs as a trusted extension of the SharePoint application context, InFlight™ sits between PeopleSoft and SharePoint, filtering the content exchanged between the two systems, on the fly. InFlight™ uses PeopleSoft's existing HTML rendering channels and therefore no changes to your IT infrastructure are necessary.
