Validated Integration

PeopleSoft Enterprise

Through the Oracle PartnerNetwork Application Integration Architecture for Partners Initiative, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

InFlight: PeopleSoft to SharePoint Integration on the Fly!

Company Overview

Since 1993 BTRG has been a leading systems integrator of Oracle's PeopleSoft Enterprise applications for Fortune 1000 clients in the financial services, insurance, government contracting, and healthcare industries. It specializes in PeopleSoft Financials, human capital management (HCM), supplier relationship management (SRM), and supply chain management (SCM) integration, implementation, and upgrade projects. Having completed more than 125 full lifecycle PeopleSoft projects, BTRG provides a full spectrum of PeopleSoft services, from implementation and upgrades to managed hosting and help desk support.

Integration Overview

Thousands of organizations worldwide manage their operations with PeopleSoft Enterprise applications. In addition, SharePoint is one of Microsoft's fastest-growing product lines. InFlight is a widely used tool that enables out-of-the-box integration between PeopleSoft Enterprise and Microsoft SharePoint 2007.

InFlight enables organizations to surface PeopleSoft Web application content within SharePoint portals quickly, easily, and without having to write a single line of code. If you have both a PeopleSoft application and SharePoint up and running, this tool will allow you to rapidly pull PeopleSoft components into your SharePoint portal.

As opposed to simply linking to a PeopleSoft application from within SharePoint, InFlight pulls entire sections of the PeopleSoft user interface into SharePoint so that users can view and make changes to the information without having to leave their SharePoint portal.

InFlight filters the conversation between the PeopleSoft application and SharePoint on the fly so that your PeopleSoft content functions properly even when it is contained in a SharePoint page.

Among other benefits, InFlight saves on training costs and development time, and your PeopleSoft content can adopt the look and feel of your SharePoint portal or retain its native PeopleSoft style. In any case, users can access only PeopleSoft content available to them as defined by their PeopleSoft access privileges.

Product Features

- Rapid installation and configuration
- No customization to the PeopleSoft application is required.

Availability

Sales and Marketing Office
1 Cottage Street
Mail Box 39
Easthampton, MA 01027

Support

btrgroup.com/solutions/btrg-innovations/peoplesoft-sharepoint-integration.php

- No additional hardware is required.
- If you can see it in the PeopleSoft application, you can present it in SharePoint.
 - If you're not authorized to see it in the PeopleSoft application, you won't be able to see it in SharePoint.

Integration Details

InFlight is a proprietary SharePoint Web Part combined with a custom HTTP handler. It resides on an organization's SharePoint servers and enables you to surface the PeopleSoft user interface within your SharePoint portal. Acting as an HTTP proxy server, InFlight filters the conversation between the PeopleSoft application and SharePoint on the fly. In doing so, InFlight removes any elements of the PeopleSoft content that might prevent a smooth and predictable user experience within SharePoint.

How It Works

Simply install the tool then find the component in a PeopleSoft Web application that you want to surface in SharePoint. Next, right-click in the PeopleSoft application, copy the shortcut, paste it into the InFlight custom SharePoint Web Part, and click **Save**. When you exit SharePoint's edit mode, the PeopleSoft component will appear in SharePoint, ready for user interaction.

In minutes, virtually any component you can see within the PeopleSoft Web application (including pagelets, charts, components, work lists, and queries) can be published into SharePoint. In addition to publishing individual pages or endpoints to SharePoint, you can also publish PeopleSoft Enterprise's delivered prebuilt menus of selected content called Navigation Collections. This enables you to provide entire groups of PeopleSoft Enterprise functionality to your users with just a few clicks.

InFlight can surface virtually any PeopleSoft component. Many HR organizations will use this tool as a likely means of extending their PeopleSoft employee self-service

	<p>applications. Commonly surfaced components include</p> <ul style="list-style-type: none">• Employee self-service• Manager self-service• Paycheck viewing• Time sheets <p>Environment</p> <p><i>BTRG Environment</i></p> <p>InFlight version 5.1</p> <p>Microsoft SharePoint 2007; Windows SharePoint Services (WSS) 3.0; Microsoft Office SharePoint Server (MOSS) 2007, Standard and Enterprise</p> <p><i>Oracle Environment</i></p> <p>PeopleSoft Enterprise Release 9.1</p> <p>PeopleSoft PeopleTools Release 8.5</p> <p>For additional information about partnering with Oracle, please contact opninfo_us@oracle.com or visit partners.oracle.com.</p> <p>Oracle is a registered trademark of Oracle Corporation and/or its affiliates.
